Git GitHub Branch

SHARE

‹ Previous Next ›

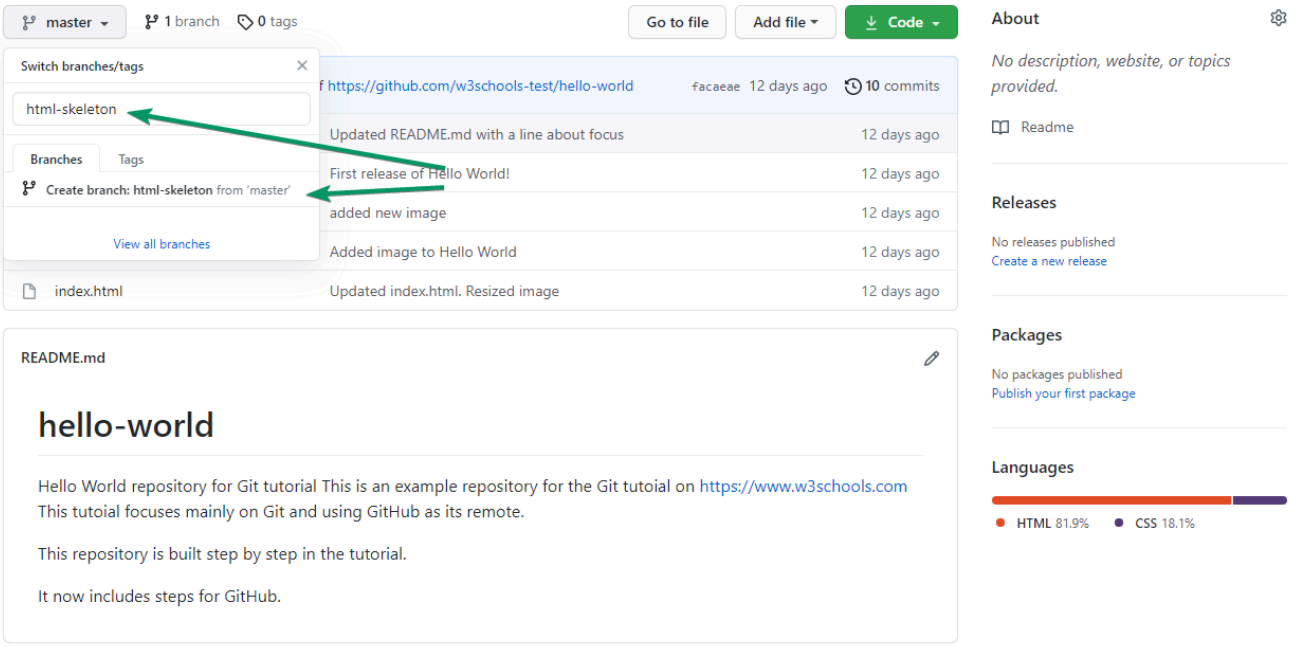

Create a Branch

On GitHub, access your repository and click the "master" branch button.

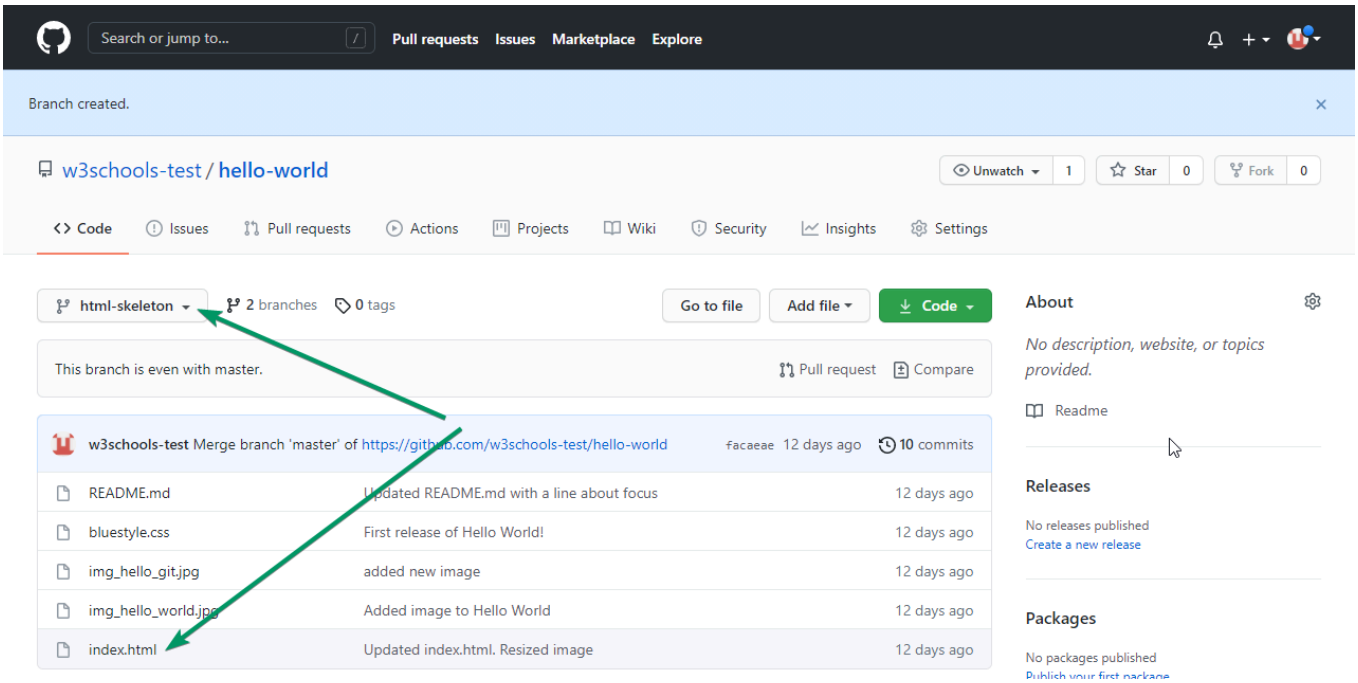

There you can create a new Branch. Type in a descriptive name, and click Create branch:

Change Platform:
GitHub
Bitbucket
GitLab

The `branch` should now be created and active. You can confirm which branch you are working on by looking at the branch button. See that it now says "html-skeleton" instead of "main"?

Start working on an existing file in this branch. Click the "`index.html`" file and start editing:

After you have finished editing the file, you can click the "Preview changes" tab to see the changes you made highlighted:

If you are happy with the change, add a comment that explains what you did, and click Commit changes.

You now have a new `branch` on GitHub, updated with some changes!

Switch Branch

To switch to another branch in GitHub's web interface, click the branch dropdown and select the branch you want to work on.

To switch branches using the command line:

Example

```
[user@localhost] $ git switch branch-name
```

To delete a branch on GitHub, go to the branches page, find your branch, and click the delete icon (trash can).

To delete a branch using the command line:

Example

```
[user@localhost] $ git branch -d branch-name
```

To delete a remote branch:

Example

```
[user@localhost] $ git push origin --delete branch-name
```

Rename Branch

To rename a branch using the command line:

Example

```
[user@localhost] $ git branch -m old-name new-name
```

Merge Branch

To merge a branch into another on GitHub, open a Pull Request (PR) and follow the prompts to merge.

To merge using the command line:

View Branches

To see all branches in your repository on GitHub, click the branch dropdown at the top of the file list.

To view branches using the command line:

Example

```
[user@localhost] $ git branch
```

Protected Branches

Some branches (like `main`) may be protected, meaning you cannot delete or force-push to them without special permissions.

This helps prevent accidental changes to important branches.
