# Git GitHub Edit Code

SHARE

‹ Previous Next ›

## Edit Code in GitHub

GitHub lets you edit files directly in your browser.

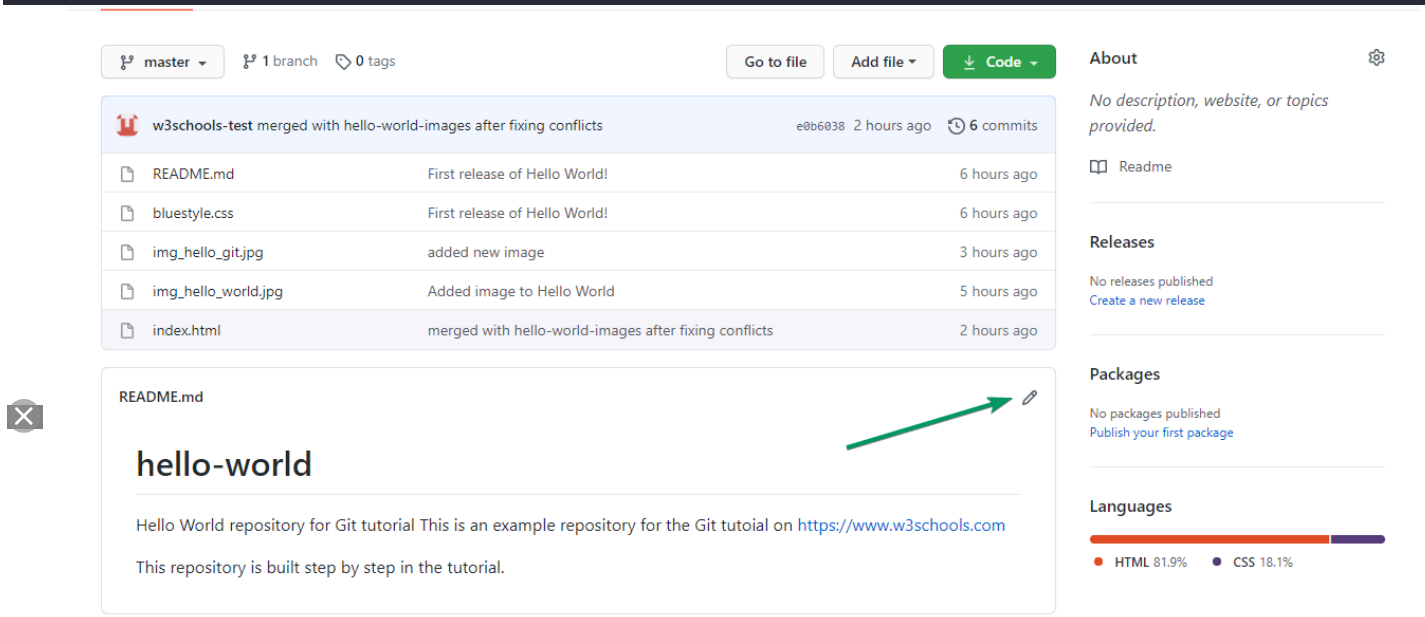

This is useful for making quick changes without needing to use Git on your computer.

Change Platform:
GitHub
Bitbucket
GitLab

## Edit Any File

To edit a file (like `README.md`), click the file name in your repository, then click the **Edit** button (pencil icon):

C++ C# AWS W3.CSS HOW TO BOOTSTRAP REACT MYSQL JQUE

You can now make changes to the file in the editor. You can edit any file, not just README.md.

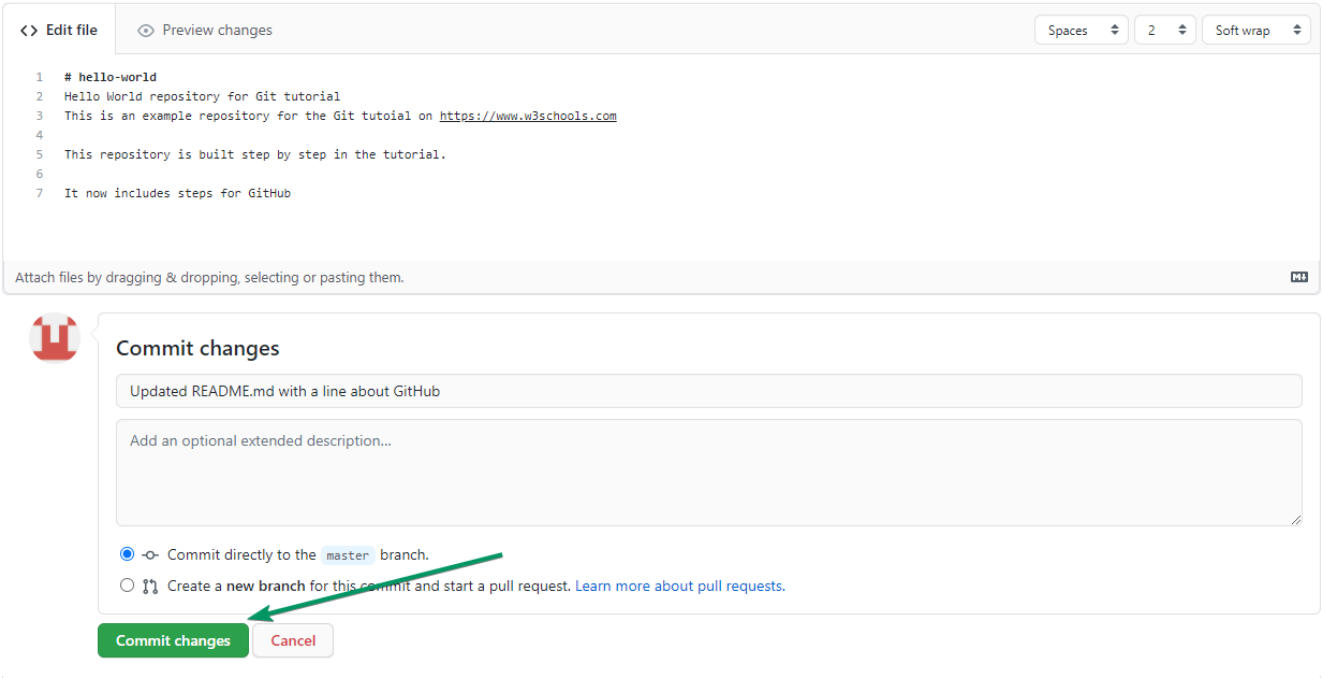

# Write a Commit Message

After editing, scroll down to the **Commit changes** section.

Add a short, clear description of what you changed in the **Commit message** box.

This helps others understand your update. Learn more about commits

# Preview Changes

Before saving, you can click **Preview changes** to see what will change in the file.

This helps you check your edits before committing.

# Commit to a Branch

By default, you can commit directly to the `main` (or `master`) branch.

For bigger changes, it's best to create a new branch.

Select **Create a new branch for this commit and start a pull request** to work safely. Learn more about branches

# Create a New Branch from the Editor

That is how you edit code directly in GitHub!
