Add to Someone Else's Repository

At the heart of Git is collaboration.

However, Git does not allow you to add code to someone else's repository without access rights.

In these next 3 chapters we will show you how to copy a repository, make changes to it, and suggest those changes be implemented to the original repository.

Change Platform:
GitHub
Bitbucket
GitLab

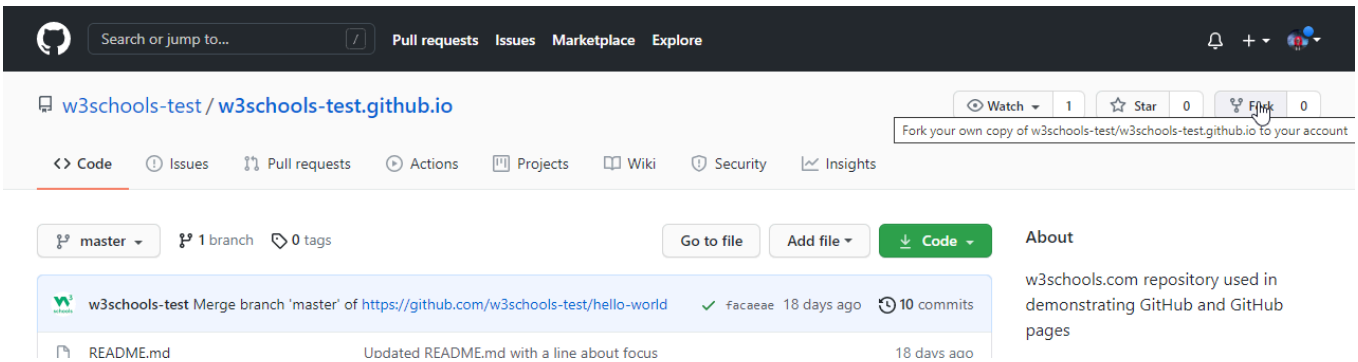

At the end of these chapters, you will have the opportunity to add a message to our public GitHub page: `https://w3schools-test.github.io/`

Fork a Repository

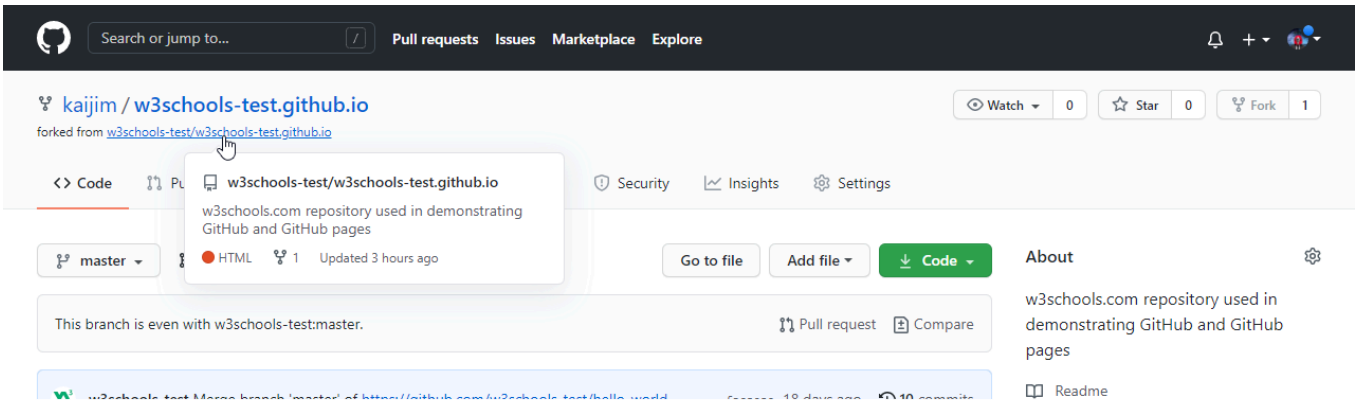

A `fork` is a copy of a repository.

Let's start by logging in to GitHub, and `fork` our repository:
`https://github.com/w3schools-test/w3schools-test.github.io`

Now we have our own copy of `w3schools-test.github.io`:

Now let's look at how we add a local copy of this for us to work with.
