Enable GitHub Pages

GitHub Pages lets you publish a website directly from your repository. To enable it:

1. Create a new repository named `your-username.github.io`.
2. Add your website files (like `index.html`) to the repository.
3. Push your changes to GitHub.

Change Platform:
GitHub
Bitbucket
GitLab

Example

Set Source Branch/Folder

You can choose which branch and folder to publish. By default, GitHub uses `main` (or `master`) and the root folder. To change this:

1. Go to your repository on GitHub.
2. Click **Settings** > **Pages**.
3. Under **Source**, select the branch and folder (e.g., `main` and `docs`).
4. Click **Save**.

View Your Site

After enabling GitHub Pages, your site will be available at `https://your-username.github.io/` (or your custom domain).

Click the link to see your live site!

Disable GitHub Pages

To turn off your Pages site:

1. Go to **Settings** > **Pages**.
2. Click **Delete** or remove the source branch/folder.
3. Optionally, delete the repository if you no longer need it.

Example

```
[user@localhost] $ git push origin --delete gh-pages
```
