Git Glossary

SHARE

This glossary covers common Git terms and concepts. Use it as a handy reference while learning and working with Git.

Summary of Git Terms

- Branch
- Checkout
- Clone
- Commit
- Conflict
- Fetch
- Fork
- HEAD
- Index (Staging Area)
- Merge

Tutorials Exercises W3Schools app iOS & Android NEW Sign In

- Remote
- Repository (Repo)
- Stash
- Tag
- Upstream
- Working Directory

Example

```
[user@localhost] $ git branch feature/login
```

Checkout

Switch to a different branch or commit.

Learn more on our Git Checkout page

Example

```
[user@localhost] $ git checkout main
```

REMOVE ADS

Clone

Learn more on our Git Clone page

Example

```
[user@localhost] $ git clone https://github.com/user/repo.git
```

Commit

A snapshot of your changes in the repository.

Learn more on our Git Commit page

Example

```
[user@localhost] $ git commit -m "Add login feature"
```

resolve the differences manually.

Learn more on our Git Branch Merge page

Example

```
[user@localhost] $ # Example: Merge conflict message
[user@localhost] $ # CONFLICT (content): Merge conflict in file.txt
```

Fetch

Download changes from a remote repository without merging.

Learn more on our Git Pull from Remote page

Example

```
[user@localhost] $ git fetch origin
```

Fork

A personal copy of someone else's repository, usually on a platform like GitHub.

Learn more on our Git Remote Fork page

Example

```
[user@localhost] $ # Use the GitHub interface to fork a repo
```

Learn more on our Git Staging Area page

Example

```
[user@localhost] $ git add file.txt
```

Merge

Combine changes from different branches

Learn more on our Git Merge page

Example

```
[user@localhost] $ git merge feature/login
```

Origin

The default name for your main remote repository. You can rename or have multiple remotes if needed.

Learn more on our Git Remote page

Example

```
[user@localhost] $ git remote add origin https://github.com/user/repo.git
```

Learn more on our Git Pull from Remote page

Example

```
[user@localhost] $ git pull origin main
```

Push

Upload your commits to a remote repository

Learn more on our Git Push to Remote page

Example

```
[user@localhost] $ git push origin main
```

Rebase

Move or combine a sequence of commits to a new base commit.

Learn more on our Git Rebase page

Example

```
[user@localhost] $ git rebase main
```

Learn more on our Git Set Remote page

Example

```
[user@localhost] $ git remote -v
```

Repository (Repo)

The database where your project's history is stored

Learn more on our Git Get Started page

Example

```
[user@localhost] $ git init
```

Stash

Temporarily save changes that aren't ready to commit.

Learn more on our Git Stash page

Example

```
[user@localhost] $ git stash
```

Learn more on our Git Tag page

Example

```
[user@localhost] $ git tag v1.0
```

Note: Refer to this glossary whenever you encounter an unfamiliar Git term!

HEAD

HEAD is a reference to the current commit your working directory is based on. Usually points to the latest commit on your current branch.

Example

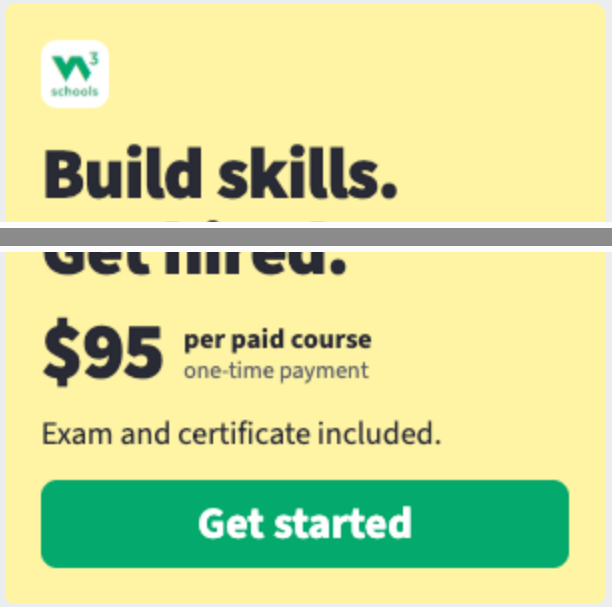

```
[user@localhost] $ git log --oneline
[user@localhost] $ # The top entry is HEAD
```

Upstream

An "upstream" branch is the default branch that your branch tracks and pulls from, usually on a remote repository.
