Git New Files

‹ Previous Next ›

What is a New File?

SHARE

A **new file** is a file that you have created or copied into your project folder, but haven't told Git to watch.

Here are the key things to know:

- Create a new file (with a text editor)
- `ls` - List files in the folder
- `git status` - Check which files are tracked
- Understand **untracked** and **tracked** files

Change Platform:
GitHub
Bitbucket
GitLab

Create a New File

Your new Git repository is empty.

For this example, we'll use a simple HTML file:

Example: Simple HTML File

```
<!DOCTYPE html>
<html>
<head>
<title>Hello World!</title>
</head>
<body>

<h1>Hello world!</h1>
<p>This is the first file in my new Git Repo.</p>

</body>
</html>
```

Save this as `index.html` in your project folder.

Example

```
[user@localhost] $ ls
index.html
```

`ls` lists all files in the current folder.

You should see `index.html` in the output.

Check File Status with `git status`

Now check if Git is tracking your new file:

Example

```
[user@localhost] $ git status
On branch master

No commits yet

Untracked files:
  (use "git add ..." to include in what will be committ
    index.html

nothing added to commit but untracked files present (us
```

Git sees `index.html`, but it is **untracked** (not yet added to the repository).

These are files you've created or copied into the folder, but haven't told Git to watch.

What is a Tracked File?

A **tracked file** is a file that Git is watching for changes.

To make a file tracked, you need to add it to the staging area (covered in the next chapter).

Troubleshooting

- **File not showing up with** `ls`: Make sure you saved it in the correct folder. Use `pwd` to check your current directory.
- **File not listed in** `git status`: Make sure you are in the correct folder and that you saved the file.
