Push Branch to GitHub

SHARE

This chapter explains how to push a branch from your local computer to GitHub.

Change Platform:
GitHub
Bitbucket
GitLab

Push a Branch to GitHub

Let's create a new local branch, make a change, and push it to GitHub.

Example

```
[user@localhost] $ git checkout -b update-readme
[user@localhost] $ Switched to a new branch 'update-readme'
```

Tutorials Exercises W3Schools app iOS & Android NEW Sign In
C++ C# AWS W3.CSS HOW TO BOOTSTRAP REACT MYSQL JQUE

```
[user@localhost] $ git status
```

Add and commit your changes:

Example

```
[user@localhost] $ git add README.md
[user@localhost] $ git commit -m "Update readme for GitHub"
```

Push your branch to GitHub:

Example

```
[user@localhost] $ git push origin update-readme
```

Use this if your branch doesn't exist on GitHub yet, and you want to track it:

Example

```
[user@localhost] $ git push --set-upstream origin update-readme
```

Force Push

Warning: This overwrites the branch on GitHub with your local changes. Only use if you understand the risks.

Example

```
[user@localhost] $ git push --force origin update-readme
```

Delete Remote Branch

Remove a branch from GitHub:

Example

```
[user@localhost] $ git push origin --delete update-readme
```

Push All Branches

Push all your local branches to GitHub:

Push Tags

Push all your tags to GitHub:

Example

```
[user@localhost] $ git push --tags
```

Troubleshooting

- **Rejected push (non-fast-forward):** Someone else pushed changes before you. Run `git pull --rebase` first, then try again.
- **Authentication failed:** Make sure you are logged in and have permission to push to the repository.
- **Remote branch not found:** Double-check the branch name and spelling.
