# Git Staging Environment

‹ Previous Next ›

## What is the Staging Environment?

SHARE

The **staging environment** (or **staging area**) is like a waiting room for your changes.

You use it to tell Git exactly which files you want to include in your next commit.

This gives you control over what goes into your project history.

Here are some key commands for staging:

- `git add <file>` - Stage a file
- `git add --all` or `git add -A` - Stage all changes
- `git status` - See what is staged
- `git restore --staged <file>` - Unstage a file

Change Platform:
GitHub
Bitbucket
GitLab

To add a file to the staging area, use `git add <file>`:

## Example

```
[user@localhost] $ git add index.html
```

Now `index.html` is staged. You can check what is staged with `git status`:

```
On branch master

No commits yet

Changes to be committed:
  (use "git restore --staged ..." to unstage)
    new file: index.html
```

# Stage Multiple Files (`git add --all`, `git add -A`)

You can stage all changes (new, modified, and deleted files) at once:

## Example

```
[user@localhost] $ git add --all
```

`git add -A` does the same thing as `git add --all`

# Check Staged Files with `git status`

See which files are staged and ready to commit:

## Example

```
[user@localhost] $ git status
On branch master

No commits yet

Changes to be committed:
  (use "git restore --staged ..." to unstage)
        new file:   README.md
        new file:   bluestyle.css
        new file:   index.html
```

Tutorials Exercises W3Schools app iOS & Android NEW Sign In
C++ C# AWS W3.CSS HOW TO BOOTSTRAP REACT MYSQL JQUE

## Example

```
[user@localhost] $ git restore --staged index.html
```

Now `index.html` is no longer staged. You can also use `git reset HEAD index.html` for the same effect.

# Troubleshooting

- **Staged the wrong file?** Use `git restore --staged <file>` to unstage it.
- **Forgot to stage a file?** Just run `git add <file>` again before you commit.
- **Not sure what's staged?** Run `git status` to see what will be committed.

## Exercise

**What is the purpose of the staging area in Git?**

- To permanently delete files.
- To display files on a stage.
- To store your project online.
- To select which changes will go into the next commit.
