Bitbucket to share your work with others. These are called **remote repositories**.

In this tutorial, you'll learn how to use Git for your own projects and how to connect with remote repositories online.

Learning by Examples

In this tutorial, we will show you Git c

Example

```
[user@localhost] $ git --version
                   git version 2.30.2.windows.1
```

For new users, using the terminal view can seem a bit complicated.

Don't worry! We will keep it really simple, and learning this way gives you a good grasp of how Git works.

In the code above, you can see commands (input) and output.

Lines like this are commands we input:

Example

```
[user@localhost] $ git --version
```

Lines like this are the output/response to our commands:

These are the commands you can copy and run in your terminal.

Tip for Beginners: Don't worry about making mistakes!

When you use Git on your own computer, you can't really break anything important.

Experimenting is a great way to learn, and you can always undo or redo changes as you go.
