Welcome to your next lesson: Welcome to FE101!

I'm preparing your personalized lesson based on what you've learned so far, what's coming up next, and how to help you grow stronger.

Step by step, you’re moving forward.

Can we get started?

Yes — and you already did the “welcome” part of FE101 ✅

You’re all set to move into the real JavaScript work next.

Quick recap of what you’re walking into so you can aim your energy:

This course is your bridge from “I know some programming” to “I can work in modern JavaScript/TypeScript like real web dev teams do.”
It’s split into 4 steps: From Python to JavaScript → JS data & logic → Going async → A taste of TypeScript.
Reviews and grading are clear and forgiving (unlimited retakes on Reviews 1–3, one retake on the final, plus discussion points and on-time bonus).

To continue, just hit Next lesson in your Learn tab and we’ll start turning all of this into hands-on skills 💪

As you go, I can:

Explain concepts step by step

Compare them to Python
Help you debug your thinking (without giving away answers you'll be graded on)

When you open the next lesson, tell me you're there and I'll walk with you through the first bit.
