MySQL CASE Statement

‹ Previous Next ›

The MySQL CASE Statement

SHARE

The `CASE` statement is used to define different results based on specified conditions in an SQL statement.

The `CASE` statement goes through the conditions and stops at the first match (like an if-then-else statement). So, once a condition is true, it will stop processing and return the result. If no conditions are true, it returns the value in the `ELSE` clause. If there is no `ELSE` clause and no conditions are true, it returns NULL.

CASE Syntax

```
CASE
    WHEN condition1 THEN result1
    WHEN condition2 THEN result2
    WHEN conditionN THEN resultN
```

MySQL CASE Example

Here we use the `CASE` estatement to categorize data (Price) and we create a new column (PriceCategory) that shows in which price category each product is:

Example

Get your own SQL Server

```
SELECT ProductName, Price,
CASE
  WHEN Price < 20 THEN 'Low Cost'
  WHEN Price BETWEEN 20 AND 50 THEN 'Medium Cost'
  ELSE 'High Cost'
END AS PriceCategory
FROM Products;
```

Drag and drop the correct keywords to complete the SQL CASE expression.

```
[          ]
  WHEN Quantity > 50 THEN 'High'
  WHEN Quantity <= 50 THEN 'Low'
  [          ] 'Unknown'
[          ] AS QuantityCategory
```

WHEN ELSE CASE AS SELECT END
