MySQL CREATE INDEX Statement

‹ Previous Next ›

MySQL CREATE INDEX Statement

SHARE

The `CREATE INDEX` statement is used to create indexes on tables in databases, to speed up data retrieval.

The users cannot see the indexes, they are just used to speed up searches/queries.

Note: Updating tables with indexes are more time-consuming than tables without indexes (because the indexes must also be updated). So, only create indexes on columns that are frequently searched against.

- `CREATE INDEX` - Creates a non-unique index (duplicate values are allowed)
- `CREATE UNIQUE INDEX` - Creates a unique index (duplicate values are not allowed)

CREATE INDEX Syntax

```
CREATE INDEX index_name
ON table_name (column1, column2, ...);
```

CREATE UNIQUE INDEX Syntax

```
CREATE UNIQUE INDEX index_name
ON table_name (column1, column2, ...);
```

column in the "Persons" table:

```
CREATE INDEX idx_lastname
ON Persons (LastName);
```

If you want to create an index on a combination of columns, you can list the column names within the parentheses, separated by commas:

```
CREATE INDEX idx_lname_fname
ON Persons (LastName, FirstName);
```

DROP INDEX Statement

The `DROP INDEX` statement is used to delete an index in a table.

```
ALTER TABLE table_name
DROP INDEX index_name;
```
