MySQL DROP TABLE Statement

‹ Previous Next ›

The MySQL DROP TABLE Statement

SHARE

The `DROP TABLE` statement is used to permanently delete an existing table in a database.

Note: Be careful before dropping a table! Dropping a table deletes the entire table and all its content!

Syntax

```
DROP TABLE table_name;
```

```
DROP TABLE IF EXISTS table_name;
```

Note: In most databases you cannot drop a table that is referenced by a foreign key constraint in another table. To solve this, you must remove the foreign key constraint or drop the dependent table.

MySQL DROP TABLE Example

The following SQL statement drops the "Shippers" table:

Example

Get your own SQL Server

```
DROP TABLE IF EXISTS Shippers;
```

MySQL TRUNCATE TABLE

The `TRUNCATE TABLE` statement is used to delete all the records in a table, but it keeps the table structure, columns and constraints.

Syntax

```
TRUNCATE TABLE table_name;
```
