The MySQL GROUP BY Statement

The `GROUP BY` statement is used to group rows that have the same values into summary rows, like "Find the number of customers in each country".

The `GROUP BY` statement is almost always used in conjunction with aggregate functions, like `COUNT()`, `MAX()`, `MIN()`, `SUM()`, `AVG()`, to perform calculations on each group.

GROUP BY Syntax

```
SELECT column1, aggregate_function(column2), column3, ...
FROM table_name
WHERE condition
```
