MySQL SELECT Statement

‹ Previous
Next ›

The MySQL SELECT Statement

SHARE

The `SELECT` statement is used to select data from a database.

The data returned is stored in a result table, called the result-set.

The following SQL selects the "CustomerName", "City", and "Country" columns from the "Customers" table:

Example

Get your own SQL Server

```
SELECT CustomerName, City, Country FROM Customers;
```

. CSS JAVASCRIPT SQL PYTHON JAVA PHP C C++ C# AWS

```
SELECT column1, column2, ...
FROM table_name;
```

Here, *column1, column2, ...* are the **column names** in the table you want to select data from.

The *table_name* represents the **name of the table** you want to select data from.

To select all columns, without specifying every column name, use the following syntax:

```
SELECT * FROM table_name;
```

Demo Database

In this tutorial we will use the well-known Northwind sample database.

Below is a selection from the "Customers" table in the Northwind sample database:

CustomerID	CustomerName	ContactName	Address	City	PostalCode	Co
1	Alfreds Futterkiste	Maria Anders	Obere Str. 57	Berlin	12209	Ge
2	Ana Trujillo Emparedados y helados	Ana Trujillo	Avda. de la Constitución 2222	México D.F.	05021	Me
3	Antonio Moreno Taquería	Antonio Moreno	Mataderos 2312	México D.F.	05023	Me

SELECT ALL Columns

To select ALL columns, without specifying every column name, use the `SELECT *` syntax:

The following SQL selects ALL the columns from the "Customers" table:

Example

```
SELECT * FROM Customers;
```
