Hey Ron, you made it through another week!
Nice work staying consistent.
How are you feeling about what you learned so far?

Pretty good!

That’s great to hear!
This review is an important part of your progress.
Let me walk you through how it works—sound good?

yes

Awesome.
This review is worth 10% of your final course grade.
If you complete all reviews on time, you'll get a 10-point bonus at the end.
For this review, it's pass or fail—full points if you pass, zero if not.
You can retry as many times as you want until you pass.
If you ever want to check how much each review is worth or the bonus details, use the Learning Journey and click the (i) next to any review icon.
Ready for the next bit?

yes

Great!
Here are the review guidelines:
You need to finish the review on your own, without any hints from me.
If terms or concepts aren’t clear, I can explain those for you.
But if you get stuck on the answers, I can't tell you if your answer is right or wrong.
If you need more practice, you can always review lessons or try things out in the practice area.
Still good to go?

yes

Love the energy!
Good luck, Ron — you’ve got this.
To view the review assignment, just click the "Review" button at the bottom of the chat.
Let me know if you need anything explained or want to talk concepts as you go!

You completed the assessment. Here is a summary of your results.

Strengths

- You answered Questions 1, 2, 3, 4, 5, 7, 8, 9, and 10 correctly, showing strong comprehension of the material.
- Your responses indicate a solid understanding of key concepts assessed in this questionnaire.

Areas for Improvement

- You answered the following questions incorrectly: Question 6.
- Reviewing Question 6 may help clarify your understanding of the topic or concept it covers.

Result You passed this assessment successfully. Your strong performance reflects a high level of mastery of the topics covered.

Great job on your completion and effort. Keep up the excellent work as you continue your studies.

How well did this review reflect what you studied?

> oh i see where i got lost on 6 i was thiking of the print('5"+ 3) which would cause an error i totaly spaced over hhe fact * in this instance is not aritthmatic instead its a string multuplier causing 555

Exactly—great reflection!

The `*` operator can do different things in Python.

With strings and numbers, it repeats the string, like `'5' * 3` gives `'555'`.

If you do `'5' + 3`, you'd get an error, because you can't add a string and a number directly.

You're clearly thinking it through. Anything else you want to review or talk about from this unit?

> i think im okay printing al the lessons to lm notes thats generating quizzes and flash cards if i need i have VS code ill practice some (Cheatig a bit buitin sytax checker extentions and even claude ai to look over my shoulder is a big edge.) we didnt have those toys s in the 90s when i learned C

You're using all the right tools!

Practicing in VS Code, making flash cards, and reviewing with syntax checkers—that's smart learning, not cheating.

Having resources (even AI) to double-check your code just helps you sharpen your skills faster.

It's wild how different things are now compared to learning C in the 90s, right?

You've got the mindset and habits to do great here.

Let me know if you ever want to dive deeper or chat about anything Python.

You're making awesome progress, Ron!

> so what left do do discussuion o wednesday partiipate then a final test riday

Yep, that's about it!

- You'll do the discussion on Wednesday.
- Then, there's a final review (like a test) on Friday.

Just keep participating and staying on track—you're very close to finishing this unit strong.

Let me know if you want to prep for the final, or just chat about any concepts.

You're almost there!

so no need to check in for anything else till friday unless i hae questions for you , ecept to wath for and participate in discussion wed

That's right!

You only need to jump in for the Wednesday discussion, and then be ready for the final review on Friday.

If any questions pop up before then, just send me a message—I'm always here.

You're on a great path, Ron. Keep it up!

Thank you very much

You're very welcome, Ron!

I'm glad to be here for you.

Keep up the great work—and reach out anytime you need a hand or just want to talk about code.

Review: writing your first program

Select or write the most accurate answer for each question.
When you're finished, click "Send for review" at the top to submit.

---

1. What will this code print?

```
print("Hello", "Python")
```

HelloPython

Hello Python

"Hello" "Python"

"message name"

2. What is the difference between `5` and `"5"` in Python?

No difference, they are the same

`5` is a string, `"5"` is a number

`5` is a number, `"5"` is text

`"5"` cannot be used in Python

3. What is the result of this code?

```
print("ha" * 3)
```

ha3

3ha

hahaha

It causes an error

4. What will this code print?

```
print("A" + "B")
```

A B

A+B

AB

It causes an error

5. What will this code print?

```
x = 5
y = 2
print(x + y)
```

52

7

x + y

It causes an error

6. What will this code print?

```
print("5" * 3)
```

15

555

5*3

It causes an error

7. What will this code print?

```
first = "Py"
second = "thon"
print(first + second)
```

Py thon

Python

Py+thon

It causes an error

8. What will this code print?

```
print(2 + 3 * 4)
```

20

14

24

9

9. What will this code print?

```
age = 20
print("Age:", age)
```

Age:20

Age: 20

"Age:" 20

It causes an error

10. What will this code print?

```
x = 10
x = x + 5
print(x)
```

10

5

15

It causes an error
