CS101

Welcome to CS101!

Today
Welcome to your next lesson: Welcome to CS101!

I'm preparing your personalized lesson based on what you've learned, what's coming up, and the best way to help you grow.

Step by step, you’re moving forward.

Ron, let’s zoom out for a moment 🎯

In this CS101 course, you’re moving from “I can make code run” → to “I can design programs that are clear, reusable, and professional.” Think of it like going from just following a recipe to actually organizing a whole kitchen so anyone can cook there without chaos.

Here’s the journey in 4 units:

Functions Level-Up
You’ll clean up messy, all-in-one scripts into smaller, clear steps, each with a single job.

Thinking in Better Patterns
You’ll start noticing repeatable ways to structure logic so you don’t reinvent the wheel every time.

From Pieces to Logical Flow
You’ll practice connecting those pieces into workflows that actually match how real tasks happen.

Professional Planning & Implementation
You’ll plan before you code, deliver features in steps, and think the way pros do on real teams.

Before I talk about grading and reviews (how you’re scored), I want to check in:

Do you have any questions so far about this 4□unit journey, or does this high-level roadmap make sense?

no im good

Nice 👍

Let’s talk how you’re graded in this course — I’ll keep it simple and step-by-step.

Here’s the structure:

The course has 4 units, and each unit ends with a review.
Reviews 1–3 (for Units 1–3):
Each is worth 10% of your course grade
Not timed

Unlimited retakes

This means: for the first three units, you can practice the reviews as many times as you want, no time pressure, and use them to lock in your understanding.

Does that part about Reviews 1–3 make sense: 10% each, not timed, unlimited retakes?

Yes, that makes sense

Great ☑

Next piece: the last review (for the final unit) works differently:

It’s worth 60% of your course grade
It is timed
You get only one retake (so at most 2 attempts total)

You can think of it like a “final checkpoint” that pulls everything together and also trains you for real□world deadlines.

There are two more grading pieces I still need to walk you through:

Weekly discussions (10%)
On□time bonus points (up to 10)

Want me to explain weekly discussions next or bonus points next?

either imagine its same format as python was 10 for the 4 weekly discussions and 10 bonus for on time work reviews>

Exactly right 🎯

You’ve got the structure:

Weekly discussions

Worth 10% total
You earn this by participating in all weekly discussions up to the term end date
Just like your Python course: stay consistent each week, and you keep that 10%.
Bonus points

Up to 10 bonus points
You earn them by submitting and passing all unit reviews on time
It’s a reward for staying on schedule and not letting reviews pile up.
Quick check, step by step:

Reviews 1–3: 10% each, not timed, unlimited retakes ☑
Final review: 60%, timed, one retake max ☑
Weekly discussions: 10% for steady participation ☑
On-time reviews: up to 10 bonus points if all are done and passed on time ☑

Does this all line up clearly in your head now, or is there any part you’d like me to restate in a simple table or quick recap?

it makes sense

Perfect 👌

Here’s your CS101 orientation recap in one place:

You’re on a journey from “code that runs” → “software engineered for clarity, reuse, and real teamwork.”

The course has 4 units, each building your habits:

Functions Level-Up
Thinking in Better Patterns
From Pieces to Logical Flow
Professional Planning & Implementation
Reviews & grading:

Unit Reviews 1–3:
10% each
Not timed
Unlimited retakes
Final Unit Review:
60%
Timed
One retake max
Weekly discussions: 10% total for steady participation through the term
Bonus: Up to 10 extra points for submitting and passing all reviews on time
You’re set up with a clear roadmap and a grading system that rewards practice, consistency, and staying on schedule 🚀

When you’re ready, go ahead and hit Next Lesson in the Learn tab, and we’ll start leveling up those functions step by step.
